eDEN Release v2.2.12

1. Unread Conversations – Parent/Child fix

When the fix for the Parent/Child conversations was implemented, the speed of the conversation task list loading for the creditor organisations was affected. The task lists should now load quickly.

2. Error when recording some partial settlement payments

If there had been more than one partial settlement variation on a case and the first partial settlement amount had not been paid, an error occurred when the payments distributor attempted to record the ad-hoc amount on the latest partial settlement variation. This has been amended so that the payment will always be recorded against the latest approved partial settlement.

3. Debtor Details in task lists not updating with the Application in draft cases

Where the Money Adviser had entered incorrect debtor details on the creation screen of a personal application, these details were used to create the case and showed in any task list entry. Correcting the details in the personal application did not update this until after the application was issued. This has been updated so that any time the debtor details in the personal application are updated, the debtor details within the case will also update.
